## TROJAN TRACKS RUBBER TRACKS

Trojan Tracks rubber tracks are made from a rubber compound that is highly resistant to cutting and tearing under a wide range of environments.

Inside the rubber track core are “Dual Continuous Steel Belts”: multi-strand cables wound in a tight spiral to create a wide steel belt. Our belts are proven to be more reliable than traditional, overlapping steel cords.

Then, a highly engineered bonding adhesive is applied by hot dipping the drop-forged steel inserts to ensure Trojan Tracks are durable enough to withstand the most extreme conditions.
