

# EXB-HDQF QUIK FILL TRENCHING BUCKET

\*Attachments depicted may include optional paint, upgrades, or custom configurations.

With its low profile design, curved cheek plates and active attack angle, the Craig Quik Fill bucket is designed to minimize surface friction and maximize cycle time efficiency when loading and unloading the bucket.

The lengthened shell floor promotes smooth loading and unloading with minimal wasted movement. Instead of using breakout force to fill the bucket by curling the attachment, the Quik Fill bucket is designed to be pulled towards the machine – shaving material into the bucket in a smooth motion. This motion eliminates partial fills and excess spillage while also leaving the bucket closer to the open position to allow quicker dumping of the material.

- Available in Wedge Lock, Pin-on, S Series, or Manual Bar Lock lugging
- Longer hooks for easier alignment
- Quik Fill option available for HD, XHD and SS class buckets
