A Clean Cut. Everytime.

Cut the time it takes to feed high quality silage with the HLA Bale Knife.

With the increasing demand for high nutrient silage, wrapped bales have found their place in many farm yards. Feeding silage bales requires removal of both the plastic film and net wrap. Removing these coverings can cause bales to fall apart and make for clumsy handling of nutrient rich feed. Designed specifically for feeding round bales, the HLA Bale Knife rolls a lot of functionality into a single unit saving time and effort.

To prevent the wrap and netting from falling into the feeder or mixer, the proprietary system grabs the wrap and bale netting holding it securely, as the bale is sliced with the powerful serrated blade and drops free. The grabber is automatically engaged when the knife is activated through a single hydraulic auxiliary ensuring you have a tight grip before you finish slicing. The upward slicing design allows for bales to be sliced not only into feeders and mixers, but also a mere 6” above the ground, making it ideal for operation in tight areas with little overhead space.

The integrated bolt on Kverneland tines allow you to spear or scoop the bale and hold it in place with the knife to safely move it across the yard, making the HLA Bale Knife an all in one solution for bale handling.

BALE KNIFE

Proprietary Grabber

Located at the top of the Bale Knife is the proprietary grabber that hydraulically holds onto the wrap and netting. Sharing a single hydraulic valve, the grabber and cutting arm operate in sequence so as the knife slices upwards into the bale, the grabber grips the wrap and the hay falls down and away, separating the wrap and netting from the feed.

Hardened Cutting Knives

The Bale Knife cutting arm assembly features hardened knife blades to easily cut through bale wrap and netting.

The individual bolt-on knives allow for easy replacement of a single knife without needing to replace the entire row.

Integrated Kverneland Tines

Equipped with Kverneland tines and a serrated blade, the Bale Knife is an all in one solution for bale handling. Use the tines to spear a bale, or scoop the bale onto the tines and hold it with the knife to safely move it across the yard.

Adjustable Bumper

Standard on the BK60 and BK72 models, the Bale Knife comes equipped with an adjustable bumper to accommodate bales down to 48", ensuring your Bale Knife is as versatile as you are.

Model	Description	Bale Diameter	Bale Width	Weight*	Required PSI (min.)
BK48	48" Bale Knife	48"	60"	1,605 lb	2,700
BK60	60" Bale Knife	48" - 60"	60"	1,715 lb	2,700
BK72	72" Bale Knife	48" - 72"	72"	2,170 lb	2,700
